

USB Port SP2T Switch Supports USB & UART

Check for Samples: [TSU6111A](#)

FEATURES

- Switch Matrix
 - USB
 - UART Supports USB 2.0 High Speed
- Charger Detection
 - USB BCDv1.1 Compliant
 - VBUS Detection
 - Data Contact Detection
 - Primary and Secondary Detection
- Compatible Accessories
 - USB Chargers (DCP, CDP)
 - Factory Cable
- Additional Features
 - I²C Interface with Host Processor
 - Switches Controlled by Automatic Detection or Manual Control
 - Interrupts Generated for Plug/Unplug
 - Support Control Signals used In Manufacturing (JIG, BOOT)

- Max Voltage
 - 28V VBUS rating
- ESD Performance Tested Per JESD 22
 - 5000-V Human-Body Model (A114-B, Class II)
 - 1000-V Charged-Device Model (C101)
- IEC ESD Performance
 - ±8kV Contact Discharge (IEC 61000-4-2) for VBUS/DP_CON/DM_CON/ID_CON to GND
- Surge Protection on VBUS/DP_CON/DM_CON
 - USB Connector Pins Without External Component

APPLICATIONS

- Cell Phones and Smart Phones
- Tablet PCs
- Digital Cameras and Camcorders
- GPS Navigation Systems
- Micro USB interface with USB/UART

- (1) For the most current package and ordering information, see the Package Option Addendum at the end of this document, or see the TI Web site at www.ti.com.
- (2) Package drawings, thermal data, and symbolization are available at www.ti.com/packaging.

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

DESCRIPTION

The TSU6111A is a high performance differential autonomous SP2T switch with impedance detection. The switch supports the detection of various accessories that are attached through DP, DM, and ID. The charger detection satisfies USB charger specification v1.1 and V_{BUS_IN} has a 28V tolerance to eliminate the need for external protection. Power for this device is supplied through VBAT of the system or through V_{BUS_IN} when attached to a charger.

The SP2T switch is controlled by the automatic detection logic or through manual configuration of the I²C. JIG and BOOT pins are used when a USB or UART JIG cable is used to test the device in the development and manufacturing. TSU6111A has open-drain JIG output (active low).

BLOCK DIAGRAM

SWITCH MATRIX

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

PIN FUNCTIONS

PIN		I/O	DESCRIPTION
NO.	NAME		
1	DM_HOST	I/O	USB DM connected to host
2	DP_HOST	I/O	USB DP connected to host
3	TxD	I/O	UART Tx
4	RxD	I/O	UART Rx
5	VBAT	I	Connected to battery
6	BOOT	O	BOOT mode out (push-pull). Used for factory test modes.
7	JIG	O	JIG detection JIG detection (Open-drain). Used for factory test modes
8	VDDIO	O	I/O voltage reference
9	INTB	O	Interrupt to host (push-pull)
10	SCL	I	I2C clock
11	SDA	I/O	I2C data
12	GND		Ground
13	VBUS_IN	I	VBUS connected to USB receptacle
14	DM_CON	I/O	USB DM connected to USB receptacle
15	DP_CON	I/O	USB DP connected to USB receptacle
16	ID_CON	I/O	USB ID connected to USB receptacle

ABSOLUTE MAXIMUM RATINGS⁽¹⁾⁽²⁾

over operating free-air temperature range (unless otherwise noted)

			MIN	MAX	UNIT
V _{BUS}	Supply voltage from USB connector		–0.5	28	V

O _{ISO}	OFF Isolation		f = 240 MHz, R _L = 50 Ω, Switch OFF		–26		dB
X _{TALK}	Crosstalk		f = 240 MHz, R _L = 50 Ω		–32		dB

(1) V_O is equal to the asserted voltage on DP_CON and DM_CON pins. V_I is equal to the asserted voltage on DP_HT and DM_HT pins. I_O is equal to the current on the DP_CON and DM_CON pins. I_I is equal to the current on the DP_HT and DM_HT pins.

GENERAL OPERATION

The TSU6111A will automatically detect accessories plugged into the phone via the mini/micro USB 5 pin connector. The type of accessory detected will be stored in I²C registers within the TSU6111A for retrieval by the host. The TSU6111A has a network of switches that are automatically opened and closed based on the accessory detection. See [Table 1](#) for details of which switches are open during each mode of operation. The TSU6111A also offers a manual switching mode that allows the host processor to decide which switches should be opened and closed. The manual switching settings are executed through the I²C interface.

STANDBY MODE

Standby mode is the default mode upon power up and occurs when no accessory has been detected. During this mode, the VBUS and ID lines are continually monitored through comparators to determine when an accessory is inserted. Power consumption is minimal during standby mode.

POWER SUPERVISOR

TSU6111A uses VBAT as the primary supply voltage. VBUS is the secondary supply. VDDIO is used for I²C communication.

Table 1. Function Table

TSU6111A

No	No	No	Power Down Reset		

EYE DIAGRAM USB 2.0 HIGH SPEED

ACCESSORY ID DETECTION

If V_{BUS_IN} is high and the attachment is not a charger, then determine the impedance on the ID pin. If V_{BUS_IN} is low and an accessory is attached, then use an ADC for impedance sensing on the ID pin to identify which accessory is attached.

IMPEDANCE BUCKETS FOR EACH ACCESSORY

In order to implement ID detection, each accessory should contain a ID impedance resistor value (refer to [Table 2](#)) which has a 5% tolerance accuracy.

Table 2. Accessory ID and Switch States

Power-On Reset

When power (from 0 V) is applied to V_{BAT} , an internal power-on reset holds the TSU6111A in a reset condition until V_{BAT} has reached V_{POR} . Once V_{BAT} has reached V_{POR} , the reset condition is released, and the TSU6111A registers and I²C state machine initialize to their default states.

After the initial power-up phase, V_{BAT} must be lowered to below 0.2 V and then back up to the operating voltage (V_{DDIO}) for a power-reset cycle.

Software Reset

The TSU6111A has software reset feature.

- Hold low both I²C_SCL and I²C_SDA for more than 30ms to reset digital logic of the TSU6111A.

After resetting the digital logic, INTB will keep low until INT_Mask bit of Control register (0x02) is cleared.

Figure 1. Software Reset

Standard I²C Interface Details

The bidirectional I²C bus consists of the serial clock (SCL) and serial data (SDA) lines. The SCL and SDA lines must be connected to a positive supply via a pull-up resistor when connected to the output stages of a device. Data transfer may be initiated only when the bus is not busy.

I²C communication with this device is initiated by the master sending a START condition, a high-to-low transition on the SDA input/output while the SCL input is high (see Figure 2). After the start condition, the device address byte is sent, MSB first, including the data direction bit (R/W). This device does not respond to the general call address. After receiving the valid address byte, the device responds with an ACK, a low on the SDA input/output during the high of the ACK-related clock pulse.

Figure 2. Definition of Start and Stop Conditions

The data byte follows the address ACK. The R/W bit is kept low for transfer from the master to the slave. The data byte is followed by an ACK sent from this device. Data is sent only if complete bytes are received and acknowledged. The output data is valid at time (tpv) after the low-to-high transition of SCL, during the clock cycle for the ACK.

On the I²C bus, only one data bit is transferred during each clock pulse. The data on the SDA line must remain stable during the high pulse of the clock period, as changes in the data line at this time are interpreted as control commands (START or STOP, see Figure 3).

Figure 3. Bit Transfer

A Stop condition, a low-to-high transition on the SDA input/output while the SCL input is high, is sent by the master (see Figure 2).

The number of data bytes transferred between the start and the stop conditions from transmitter to receiver is not limited. Each byte of eight bits is followed by one ACK bit. The transmitter must release the SDA line before the receiver can send an ACK bit.

A slave receiver address must generate an ACK after the reception of each byte. The device that acknowledges has to pull down the SDA line during the ACK clock pulse so that the SDA line is stable low during the high pulse of the ACK-related clock period (see Figure 4). Setup and hold times must be taken into account.

Figure 4. Acknowledgment on I²C Bus

Writes

Data is transmitted to the TSU6111A by sending the device slave address and setting the LSB to a logic 0 (see Figure 5 for device address). The command byte is sent after the address and determines which register receives the data that follows the command byte. The next byte is written to the specified register on the rising edge of the ACK clock pulse.

Figure 5. Repeated Data Write to a Single Register

Figure 6. Burst Data Write to Multiple Registers

Reads

The bus master must first send the TSU6111A slave address with the LSB set to logic 0. The command byte is sent after the address and determines which register is accessed. After a restart, the device slave address is sent again but, this time, the LSB is set to logic 1. Data from the register defined by the command byte then is sent by the TSU6111A. Data is clocked into the SDA output shift register on the rising edge of the ACK clock pulse (See Figure 7).

Figure 7. Repeated Data Read from a Single Register – Combined Mode

Figure 8. Burst Data Read from Multiple Registers – Combined Mode

Figure 9. Repeated Data Read from a Single Register – Split Mode

Figure 10. Burst Data Read from Multiple Registers – Split Mode

Notes (Applicable to Figure 5–Figure 10):

- SDA is pulled low on Ack. from slave or Ack. from master.
- Register writes always require sub-address write before first data byte.
- Repeated data that writes to a single register continues indefinitely until a Stop or a Re-Start.
- Repeated data reads from a single register continues indefinitely until No Ack. from master.
- Burst data writes start at the specified register address, then advance to the next register address, even to the read-only registers. For these registers, data write appears to occur; however, no data is changed by the writes. After register 14h is written, writing resumes to register 01h and continues until a Stop or a Re-Start.
- Burst data reads starts at the specified register address, then advances to the next register address. Once register 14h is read, reading resumes from register 01h and continues until No Ack. from master.

1	VBUS	1	VBUS valid
7-1	Unused	7	Unused

APPLICATION SCHEMATIC

PIN NAME	PIN NO.	CRITICAL COMPONENT
V _{BUS_IN}	13	1µF~10µF
		ESD Protection Diode
		0.1µF
V _{DDIO}	8	1µF~10µF
		0.1µF
V _{BAT}	5	1µF~10µF
		Battery
		0.1µF
Jig	7	1kΩ
SCL	10	1kΩ
SDA	11	1kΩ
DM_CON	14	2.2Ω
		ESD Protection Diode
DP_CON	15	2.2Ω
		ESD Protection Diode
ID_CON	16	2.2Ω ⁽¹⁾
		ESD Protection Diode

(1) Optional components

SCHEMATIC GUIDELINES

1. V_{BUS_IN} , V_{DDIO} , and V_{BAT} require $1\mu F$ – $10\mu F$ and $0.1\mu F$ decoupling capacitors to reduce noise from circuit elements. The capacitors act as a shunt to block off the noise. The $0.1\mu F$ capacitor smoothes out high frequencies and has a lower series inductance. The $1\mu F$ – $10\mu F$ capacitors smoothes out the lower frequencies and has a much higher series inductance. Placing both capacitors will provide better load regulation across the frequency spectrum.
2. JIG is an open-drain output and therefore requires a $1k\Omega$ ~ $10k\Omega$ pull-up resistor to V_{BAT} .
3. SCL and SDA require $1k\Omega$ ~ $10k\Omega$ pull-up resistors to V_{DDIO} to prevent floating inputs.
4. V_{BUS_IN} , DM_CON , and DP_CON are recommended to have an external resistor 2.2Ω to provide extra ballasting to protect the chip and internal circuitry.
 - (a) For ID_CON , if there is less stress on the ID pin then the external 2.2Ω resistor is optional.
5. DM_CON , DP_CON , and ID_CON are recommended to have a $1pF$ external ESD Protection Diode rated for 8kV IEC protection to prevent failure in case of an 8kV IEC contact discharge.
6. V_{BUS_IN} is recommended to have a $1pF$ ~ $10pF$ external ESD Protection Diode rated for 8kV IEC protection to prevent failure in case of an 8kV IEC contact discharge.

RECOMMENDED OPERATING CONDITIONS

PARAMETER	DESCRIPTION	MIN	MAX	UNIT
V_{BUS_IN}	VBUS voltage	4.0	6.5	V
V_{BAT}	VBAT voltage	3.0	4.4	V
V_{DDIO}	VDDIO voltage	1.65	3.6	V
ID_CON_Cap	ID_CON capacitance		1	nF
USB_I/O	USB path signal range	0	3.6	V
Temperature	Operating Temperature	–40	85	°C

PCB ROUTING GUIDELINES

Routing Guidelines for USB Signal Integrity

1. All the USB lines DP_CON, DM_CON, DP_HT, DM_HT, TxD, and RxD
 - Must have 45Ω single ended characteristic impedance
 - Must have 90Ω differential ended impedance
 - To fulfill USB 2.0 requirements
2. TSU6111A location
 - Close to the USB connector as possible
 - Keep the distance between the USB controller and the device less than 1 inch
 - Shortening the length of the trace will reduce effect of stray noise and radiate less EMI
3. Minimize use of VIAs for USB related signals
 - Differential transmission lines should be matched as close as possible
 - For optimum USB2.0 performance, use no VIAs

REVISION HISTORY

Changes from Original (February 2012) to Revision A	Page
• Updated ORDERABLE PART NUMBER and TOP-SIDE MARKING in the ORDERING INFORMATION table.	1

PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish (6)	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
TSU6111ARSVR	ACTIVE	UQFN	RSV	16	3000	Green (RoHS & no Sb/Br)	CU NIPDAU	Level-1-260C-UNLIM	-40 to 85	ZTN	Samples

(1) The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSOLETE: TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "-" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

(6) Lead/Ball Finish - Orderable Devices may have multiple material finish options. Finish options are separated by a vertical ruled line. Lead/Ball Finish values may wrap to two lines if the finish value exceeds the maximum column width.

Important Information and Disclaimer: The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

TAPE AND REEL INFORMATION

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Reel Diameter (mm)	Reel Width W1 (mm)	A0 (mm)	B0 (mm)	K0 (mm)	P1 (mm)	W (mm)	Pin1 Quadrant
TSU6111ARSVR	UQFN	RSV	16	3000	177.8	12.4	2.0	2.8	0.7	4.0	12.0	Q1

TAPE AND REEL BOX DIMENSIONS

*All dimensions are nominal

Device	Package Type	Package Drawing	Pins	SPQ	Length (mm)	Width (mm)	Height (mm)
TSU6111ARSVR	UQFN	RSV	16	3000	202.0	201.0	28.0

RSV (R-PUQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

4207974/D 12/11

- NOTES:
- A. All linear dimensions are in millimeters. Dimensioning and tolerancing per ASME Y14.5M-1994.
 - B. This drawing is subject to change without notice.
 - C. QFN (Quad Flatpack No-Lead) package configuration.
 - This package complies to JEDEC MO-288 variation UFHE, except minimum package thickness.

RSV (R-PUQFN-N16)

PLASTIC QUAD FLATPACK NO-LEAD

- NOTES:
- A. All linear dimensions are in millimeters.
 - B. This drawing is subject to change without notice.
 - C. Publication IPC-7351 is recommended for alternate designs.
 - D. Customers should contact their board fabrication site for minimum solder mask web tolerances between signal pads.
 - E. Maximum stencil thickness 0,127 mm (5 mils). All linear dimensions are in millimeters.
 - F. Laser cutting apertures with trapezoidal walls and also rounding corners will offer better paste release. Customers should contact their board assembly site for stencil design recommendations. Refer to IPC 7525 for stencil design considerations.
 - G. Side aperture dimensions over-print land for acceptable area ratio > 0.66. Customer may reduce side aperture dimensions if stencil manufacturing process allows for sufficient release at smaller opening.

IMPORTANT NOTICE

Texas Instruments Incorporated (TI) reserves the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete.

TI's published terms of sale for semiconductor products (<http://www.ti.com/sc/docs/stdterms.htm>) apply to the sale of packaged integrated circuit products that TI has qualified and released to market. Additional terms may apply to the use or sale of other types of TI products and services.

Reproduction of significant portions of TI information in TI data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such reproduced documentation. Information of third parties may be subject to additional restrictions. Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyers and others who are developing systems that incorporate TI products (collectively, "Designers") understand and agree that Designers remain responsible for using their independent analysis, evaluation and judgment in designing their applications and that Designers have full and exclusive responsibility to assure the safety of Designers' applications and compliance of their applications (and of all TI products used in or for Designers' applications) with all applicable regulations, laws and other applicable requirements. Designer represents that, with respect to their applications, Designer has all the necessary expertise to create and implement safeguards that (1) anticipate dangerous consequences of failures, (2) monitor failures and their consequences, and (3) lessen the likelihood of failures that might cause harm and take appropriate actions. Designer agrees that prior to using or distributing any applications that include TI products, Designer will thoroughly test such applications and the functionality of such TI products as used in such applications.

TI's provision of technical, application or other design advice, quality characterization, reliability data or other services or information, including, but not limited to, reference designs and materials relating to evaluation modules, (collectively, "TI Resources") are intended to assist designers who are developing applications that incorporate TI products; by downloading, accessing or using TI Resources in any way, Designer (individually or, if Designer is acting on behalf of a company, Designer's company) agrees to use any particular TI Resource solely for this purpose and subject to the terms of this Notice.

TI's provision of TI Resources does not expand or otherwise alter TI's applicable published warranties or warranty disclaimers for TI products, and no additional obligations or liabilities arise from TI providing such TI Resources. TI reserves the right to make corrections, enhancements, improvements and other changes to its TI Resources. TI has not conducted any testing other than that specifically described in the published documentation for a particular TI Resource.

Designer is authorized to use, copy and modify any individual TI Resource only in connection with the development of applications that include the TI product(s) identified in such TI Resource. NO OTHER LICENSE, EXPRESS OR IMPLIED, BY ESTOPPEL OR OTHERWISE TO ANY OTHER TI INTELLECTUAL PROPERTY RIGHT, AND NO LICENSE TO ANY TECHNOLOGY OR INTELLECTUAL PROPERTY RIGHT OF TI OR ANY THIRD PARTY IS GRANTED HEREIN, including but not limited to any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information regarding or referencing third-party products or services does not constitute a license to use such products or services, or a warranty or endorsement thereof. Use of TI Resources may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

TI RESOURCES ARE PROVIDED "AS IS" AND WITH ALL FAULTS. TI DISCLAIMS ALL OTHER WARRANTIES OR REPRESENTATIONS, EXPRESS OR IMPLIED, REGARDING RESOURCES OR USE THEREOF, INCLUDING BUT NOT LIMITED TO ACCURACY OR COMPLETENESS, TITLE, ANY EPIDEMIC FAILURE WARRANTY AND ANY IMPLIED WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, AND NON-INFRINGEMENT OF ANY THIRD PARTY INTELLECTUAL PROPERTY RIGHTS. TI SHALL NOT BE LIABLE FOR AND SHALL NOT DEFEND OR INDEMNIFY DESIGNER AGAINST ANY CLAIM, INCLUDING BUT NOT LIMITED TO ANY INFRINGEMENT CLAIM THAT RELATES TO OR IS BASED ON ANY COMBINATION OF PRODUCTS EVEN IF DESCRIBED IN TI RESOURCES OR OTHERWISE. IN NO EVENT SHALL TI BE LIABLE FOR ANY ACTUAL, DIRECT, SPECIAL, COLLATERAL, INDIRECT, PUNITIVE, INCIDENTAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES IN CONNECTION WITH OR ARISING OUT OF TI RESOURCES OR USE THEREOF, AND REGARDLESS OF WHETHER TI HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

Unless TI has explicitly designated an individual product as meeting the requirements of a particular industry standard (e.g., ISO/TS 16949 and ISO 26262), TI is not responsible for any failure to meet such industry standard requirements.

Where TI specifically promotes products as facilitating functional safety or as compliant with industry functional safety standards, such products are intended to help enable customers to design and create their own applications that meet applicable functional safety standards and requirements. Using products in an application does not by itself establish any safety features in the application. Designers must ensure compliance with safety-related requirements and standards applicable to their applications. Designer may not use any TI products in life-critical medical equipment unless authorized officers of the parties have executed a special contract specifically governing such use. Life-critical medical equipment is medical equipment where failure of such equipment would cause serious bodily injury or death (e.g., life support, pacemakers, defibrillators, heart pumps, neurostimulators, and implantables). Such equipment includes, without limitation, all medical devices identified by the U.S. Food and Drug Administration as Class III devices and equivalent classifications outside the U.S.

TI may expressly designate certain products as completing a particular qualification (e.g., Q100, Military Grade, or Enhanced Product). Designers agree that it has the necessary expertise to select the product with the appropriate qualification designation for their applications and that proper product selection is at Designers' own risk. Designers are solely responsible for compliance with all legal and regulatory requirements in connection with such selection.

Designer will fully indemnify TI and its representatives against any damages, costs, losses, and/or liabilities arising out of Designer's non-compliance with the terms and provisions of this Notice.
